

Vladimir Sachkov

Utrecht, Netherlands

Machine learning engineer - 3D vision, LiDAR, production ML

vladimirsachkov2003@gmail.com · GitHub · LinkedIn · Website

Experience

Clear Timber Analytics - ML Engineer

May 2025 - now

ML core of a tree-analysis product, end to end: 3D instance segmentation on very large LiDAR point clouds (reproduced ForestFormer3D and extended it past the prior open-source state of the art), the C/C++-accelerated point-cloud library underneath, and the MLOps platform around it - one YAML file configures a fully tracked, reproducible training run on versioned data. Longest-tenured engineer on the ML team and de-facto product lead: experiment planning, sprint facilitation, platform ownership.

VisionPlatform - Computer Vision Intern

Jun - Sep 2024

Auto-annotation pipeline built on an ensemble of open-vocabulary vision-language models; multi-GPU inference serving.

BasisHealth - Backend Developer

2022 - 2023

Go microservices on Kubernetes, bidirectional gRPC streaming, Jenkins CI/CD - alongside full-time study.

Education

TU Delft - BSc Computer Science, cum laude

2022 - 2025

GPA 8.1/10. Minor in Quantum Science & Quantum Information; 10/10 in Mathematical Analysis from the maths bachelor. Thesis (9.5/10): domain adaptation for hand-landmark detection in infrared imaging, supporting early leprosy screening in Nepal. Founded the university programming-contest committee.

University of Groningen - Computing Science

2021 - 2022

First year at GPA 9.35/10, then transferred to TU Delft.

IB Diploma, Moscow

2019 - 2021

80% merit scholarship for IT competitions and organizing CS events.

Awards & selected projects

- **Best Dify Workflow Integration, {Tech: Europe} Paris AI Hack** (2026) - NestAI, a “where should I live?” agent: neighborhood amenity scoring, live listings, a custom OpenStreetMap plugin, multilingual UI.
- **Physical AI Hackathon, Google DeepMind × IBM × Arke, Zurich** (2026) - factory production scheduler: EDF planning, an LLM layer for plain-English operator commands, camera-driven defect detection rescheduling the line in real time.
- **re:connect Hackathon (OVD-Info), Berlin - Data & AI track** (2026) - LLM observability and anonymization proxy for OVD-Info’s helpline (Chatwoot); keeps sensitive victim data out of LLM APIs; shipped at the hackathon, now being integrated into production.
- **2nd place, bunq Financial API Hackathon** (2025) - LLM-driven simulation engine for testing banking scenarios in natural language.
- **2nd place, AI-Academy Olympiad, Russia** (2021) - MuSeRC reading comprehension: ensembling over Russian SuperGLUE models, +2% F1a over the published state of the art.
- **3rd place, 38th Classic CloudDelight Coding Contest, Amsterdam** (2023); GoTo camp (Russia’s largest competitive-programming camp): eight-time participant, twice a junior teacher.

Skills

- **Languages:** Python (expert), C/C++ (pybind11, CPython extensions), Go, SQL, JavaScript
- **ML & numerics:** PyTorch (+ Lightning), FlashAttention, transformers, scikit-learn, NumPy, SciPy
- **Systems & MLOps:** Azure DevOps, MLflow, DVC, Docker, Kubernetes, gRPC, REST, PostgreSQL, Redis, Linux
